Hello.

I have someone who wishes to take raster images (512x512 byte images) from PV-WAVE CL and pass them on to their RasterOps frame buffer for subsequent recording to videotape. They have all the required hardware and blank tapes, just wondering how to pass an image from WAVE to the RasterOps board. The board can accept Targa format image files, but WAVE does not write to Targa format. Has anyone attempted this or have any WAVE routines that take an arbitrary bitmap and dump it to a Targa format file?

They want a video animation of successive WAVE generated image frames.

Thanks.
