
Subject: ishft(-32768,-1) = 2147467264 ?

Why does IDL's fix function think -32768 is a long integer?

```
IDL> print,ishft(-32768,-1)  
2147467264  
IDL> print,ishft(fix(-32768),-1)  
16384
```

The second result is what I expected from the first call to ishft. Do I
not understand something properly?

George
