Regi\$ter Online!'s "Design-YOURware" is a programming proposal and creativity tool allowing you to design the specific type of software you need and want.

The total package of "Design-YOURware" is summed up as a group of programming proposals presented to programmers and attracting bids for the compilation of your creations.

Within this package, you'll find 27 separate programming proposals containing all the components you may ever want in a program with options to add your own ideas. All coding and/or programming is performed by the software developer who replies with an appropriate bid, and signs a private "work-for-hire" contract with you (sample included).

After you have edited and saved the proposal to read as you want it to, copy and paste it into your email program or newsgroup program to send it to where you will attract bids (areas listed in file) and prepare your "work-for-hire" contract (sample included) while you wait for responses.

Requires a Rich Text Format Editor and Unzipping Program.
