
Subject: How to use "defroi.pro" in widget applications

Hi all PV-Wave users,

I got some problems when I used "defroi.pro" in widget applications.
I want to define some regions of interest in an image which is displayed
by a widget program. When I used "defroi.pro", only one region of interest
can be drawn every time. How can I implement my widget program or "defroi.pro"
in order to draw more regions of interest instead of only one at each time.
Moreover, is there any widget program which can be used for drawing
regions of interest and where can I get it ? The PV-Wave version that I
currently used is 5.00.

Thank for any help.

KP WONG.
