Hello!

We are working on a larger user-interface with IDL.
The program has already very many lines and very
many widgets with labels and buttons and so on...

First time running our program under IDL 5 we had been
very shocked.....
IDL 5 is positioning the widgets in totally other places...
:((((((((

Now we are working a several time to get our outlook from
before.....

Has anybody else such awfull experiences and a short solution
for this..??

Whats about the next IDL-release? Will it be the same?????

Regards, Astrid
