I am using READ_GIF and READ_SRF to read GIF and Sun Raster files with IDL. The problem I am having is I would like to resize the TV window to fit the GIF or raster file. This x and y size information doesn't appear with READ_GIF or READ_SRF. Just filename, image, and color. My question is, Where can I get the x and y size information about GIF or raster file? This information is within the GIF and Sun raster file, but does IDL provide it?
