My vote goes to the Turing Machine, for their raw execution speed.

Indeed. Please, Vincent, take as many votes as you can, but don't call the most-voted-for language "best". Call it "popular".

Better still, call it "most popular among the programmers who read  
Usenet comp.lang.\* - groups"...

Or "the most fanatically supported" - or whatever...

Followup set to all original newsgroups except comp.lang.idl-pvwave,  
in the assumption that most people here are practical minded - not  
religious - about their programming practices...

Stein Vidar

I could certainly live with Ada, but do you know if there's  
a hardware synthesizer available for it ? ;-)

Kind regards.
