
Subject: how to add mark for every points in each plot?

I have two arrays. Every array has 12 numbers. Each number stands for the data for every month of some year. My boss want to plot these two arrays (X versus Y) but he let me mark '1', '2', or 'Jan', 'Feb' besides every point in the plot. I try to find some parameters in the PLOT routine which can add such mark, but PLOT has no such parameter or function. I try to use OPLOT, in order to every time I call OPLOT, it only plot one point. But OPLOT or PLOT only accept the array arguments. How can I do? Is there any expert knowing how to do this?
