I have such kind of code. The purpose of this code is to read data from file into a matrix.

```
openu,1,'cod10.dat'
```

```
x=fltarr(4,36)
```

```
readf,1,x
```

The numbers of the data file is like this:xxxxxx.xx.but when I check the x matrix,I found that the digits below the point are lost(cut).I only get number like:xxxxx.(. means point)

how does this happens?

thanks
