I am converted some FORTRAN code into IDL, but I am confused what this FORTRAN statement "SINE(X)=SIN(.01745329\*X) " in this function is trying to do.

```
FUNCTION GETDIST (HEIGHT,ANGLE,ZENANG,SLANT)
DATA RAD/3437.748/
SINE(X)=SIN(.01745329*X)
ARCSIN(X)=57.29578*ASIN(X)
ANG=ABS(ANGLE)
FAC=SINE(ANG)/RAD
```

```
.
```

Any hints?
