We're looking for someone with good data analysis and programming skills, (particularly IDL) to assist in calibration and characterization of the Landsat-7 ETM+ instrument. Experience/skills in remote sensing, image processing, sensor calibration, Unix (SGI), and web development is desirable. This work is available immediately and is onsite at the NASA Goddard Space Flight Center in Greenbelt, MD. If you're interested in more details, please contact me directly. Thanks.

-Bill
