Hi all,

I'm trying to plot two images in one Postscript file using the same color table. The only problem is that I want to apply a different gamma correction to each image.

Something like ...

LOADCT, 3

TV, image1
GAMMA_CT,.7

TV, image2
GAMMA_CT,.3

The GAMMA_CT changes the appearance of both the images each time it is applied - I want a separate gamma correction for each image.

Any body come up against this problem before?

Peter.
