Hi again,

Does anyone know of a simple reason why XSURFACE would fail? I get the following error message: (running IDL version 4.0 on a sunos 5.5 sparc)

```
XSURFACE, ((float(imag_b(*, *, 15)))^2)+((float(real_b(*, *, 15)))^2)
% Compiled module: XSURFACE.
% Compiled module: XREGISTERED.
% Attempt to call undefined procedure/function: 'XPDMENU'.
% Execution halted at: XSURFACE      262
  /usr/local/rsi/idl/lib/xsurface.pro
%                               $MAIN$
```

This also results in my variables being lost. I can't find the line in xsurface.pro that attempts to call XPDMENU either.

Martin
