As someone who has an IDL license at home, I can tell you for sure that this doesn't necessarily make the wife any happier. :-)

Cheers,

David

I'll throw my \$0.02 hat into the ring.

I work in a fairly competitive, 100% soft-money research environment. If we \*have to have\* a certain piece of software for a project we write the cost of that software into a grant proposal. If the software isn't required, it doesn't get bought. We recently started a new project where we needed IDL on

a couple of Sun workstations, no problem. It's our first experience with IDL. I'd like to "play" a little with IDL to learn it (nothing like "hands on training"), but the Sun's just don't fit in my briefcase, whereas a laptop does. The upshot is that either I take longer to learn IDL (because I'm not willing to spend the extra time at work) or my Wife sees less of me (because I am willing to spend the extra time at work). If a fully functional IDL license for a PC was 10% of what it costs now (I find it really hard to believe that \*anyone\* can justify \$1500 for a single user PC license), both my boss and my wife would be happy...

Oh well, thanks for letting me rant.

Bruce
