Hi,

I wrote a few widget routines to supplement the dialog routines supplied by RSI. I have the following dialog widgets available:

dialog_menu: Allows a choice from a dialog menu.

dialog_input: Dialog widget to input a line of text.

dialog_text: Display a STRARR of text, or an ASCII file.

dialog_slider: Dialog to select a value from a slider.

Feel free to grab the source code from

<http://cspara.uah.edu/~mallozzir/idl/idl.html>

and please let me know if you run across any errors.
Note that these require IDL v5.
