Dear All!

I have tried to read a Sun AU (audio file) with IDL, but I haven't been successful. All I have is that I should look at OPENR and ASSOC, but being an novice in IDL and unable to figure out the format of the au-file, this didn't help me much. I have searched the FAQ and the archives I could find without success, so I wondered if anybody has written a function to read AU files, or give me more hints on how to do it?
