Hi,

Several days ago I posted an announcement about some dialog_widget routines I wrote as supplements to the dialog routines supplied by RSI. I made some non-compatible changes today to my dialog_menu routine to make it more consistent with dialog_message (it now returns the user-selected string instead of the menu item index like the old IDL wmenu routine), so if anyone is actually using the routine :-), please get the new version (<http://cspar.uah.edu/~mallozzir/>).
