Subject: How to make 2-d plots in 3-d?

Hello, fellow IDL users -

I am just beginning to delve into 3-d plotting. I have a series of 2-d plots that I want to display receding into the distance, each at a specified distance. Creating a 2-d array and using SURFACE, Z, X, Y, /HORIZONTAL doesn't work since the X values are very irregularly grided, and something in the line-removal algorithm is messing up. I have a cumbersome work-around, but is there an elegant way to do it?

Also, for any 3-d plot, how do I get annotation to come out on the X-Z plane?
