
Subject: Astronaut coin design still evolving (IDL related)

Many of you saw my IDL generated images of the proposed Astronaut design for the new USA \$1 coin.

Now that I have the IDL 5.1 beta running, I was able to use the new buffer object to render at a resolution larger than the size of the screen (and then rebin the images down to a displayable size). I have also made numerous revisions to the design and have rendered it with different lighting.

The previous images were good, but the new ones are truly amazing, even to me.

Take another look:

<http://www.rmi.net/~dcarr/dollar.htm>

Any support of this proposal is greatly appreciated !
