Uh, *why*?!

There are a couple of people in this newsgroup who are going completely over the edge. Get a grip, folks. It is Friday night for goodness sake.

Keep an eye on my web page for an announcement of an IDL 12-Step Group. We will be meeting on Friday evenings and on all holiday weekends from now until the end of the year. :-)

Cheers,

David

P.S. I get a VERY thin window on my machine. :-)

Hi all,

```
try:
window,xsize=0
```

I get:

```
% X windows protocol error: BadValue (integer parameter out of range for
operation).
```

```
% X windows protocol error: BadValue (integer parameter out of range for
operation).
```

```
% X windows protocol error: BadWindow (invalid Window parameter).
```

% X windows protocol error: BadWindow (invalid Window parameter).

on an IBM RS6000-39H with AIX 4.1 -- and I don't get back to the IDL prompt, so I have to kill it. Is this a known bug ?

Martin.
