Can anyone point me in the right direction. I have just started to learn
about the IDL Object Graphics stuff.I have an object, a surface plot,
and set the color red

my_surf->SetProperty,color=[255,0,0]

I can rotate the object, and would like the underside of the plot to be
a different color:

my_surf->SetProperty,bottom=[0,0,255]

This doesn't seem to work, can anyone suggest a reason why.

Many Thanks

Neil
