Hi All,

I'm trying to make a printout of the OOG manual on a printer capable of printing 2 sides. I have Acrobat 3.0 working and can make a postscript file. Working from SGI UNix platform, I use lpspr -K2 to make 2 sided copy, but only 1 page gets printed out, for a test document of 10 pages. For a 300 page document, I'd really appreciate some advice before making any serious mistakes (Trying to balance saving some trees with saving my eyesight)

Thanks,
Rose
