Subject: map_set, contour, path_filename norm to lon,lat coord

RE my earlier question about converting normalized coordinates along
contour lines to longitude and latitude after a MAP_SET, I now see that
the CONVERT_COORD routine does do this conversion properly.   My test
program had an unexpected rescaling with a PLOT command after the
MAP_SET and before the CONVERT_COORD, which prevented CONVERT_COORD
from converting back to lon, lat.
