I am building up a small archive of IDL routines & classes that might be of interest to others. It can be found at:

<http://www.niwa.cri.nz/~hadfield/software/idl/>

I've just added MGHgrGraph, a subclass of IDLgrView that implements a simple x-y graph and has methods for adding axes, plots, annotations etc. The most convenient thing about it is that atoms added to the graph automatically have their scaling adjusted to fit the axes.
