
Subject: Embedding IDL within a C++ app

Hi,

I am writing some C++ signal processing routines to compute the FFT, autocovariance etc....

However I wondered if it is possible to embed such IDL routines within a DLL (for example) to be included as part of my C++ code.

Finally, I wondered if it was possible to visualise my data through IDL, e.g. time-varying power spectral density in 3D, by calling the graphics routines through some sort of interface, e.g. a DLL.

Thanks in advance

Mark
