What is the simplest way to read ERDAS IMAGINE format in IDL?
Any Experiences?

Thanks

Achim Hein

```
ENVI_OPEN_DATA_FILE, erdasFile, /IMAGINE, R_FID=fid
stcGeo = ENVI_GET_MAP_INFO(FID=fid)
projName = stcGeo.proj.name
utmZone = fix(stcGeo.proj.params[0])
datum = stcGeo.proj.datum
ENVI_FILE_QUERY, fid, DIMS=dims, NL=height, NS=width
data = ENVI_GET_DATA(DIMS=dims, FID=fid, pos=[0])
```
