
Subject: strange behaviour with z-buffer

I produce gif files with these 2 different ways:

```
1)
set_plot,'x'
window,0,reatin=2,xsize=700,ysize=500
plot.....
img=tv()
write_gif,'filename',img
```

```
2)
set_plot,'z'
device,set_resolution=[700,500]
plot
img=tv()
write_gif,'filename',img
```

But the gif files obtained are different!!!

The relative position of the colorbar, using the z-buffer are wrong!,

there are some

strange overplottings!!

Can I avoid this problem?

How can I get, with z-buffer, exactly the same gif file of the
x-window???

THANKS in advance
