Subject: Control-C and cleanup routine

---

I am running IDL 5.0.2 on an HP workstation with HP-UX 11.

I have created a widget application which reads data into

shared memory and does statistics and plots of the data.

If the user types Control-C (interrupts program execution),

I would like to run a cleanup routine that would get rid

of any shared memory owned by the user.

Question: How do I tell IDL to run a routine when

Control-C is typed ?

Cathy
