Hi

I am trying to overlay two images by choosing 4 points in one image and 4 points in the other. I then use POLYWARP and PLOT\_2D to overlay them. However, I do not wish to use the area that the warped image 'leaves behind'. This screws up my comparison measurements between the two images. I have tried setting the 'missing' keyword to !VALUES.F\_INFINITY or !VALUES.F\_NAN so that I may subsequently ignore these values but this does not work. Any ideas?

Cheers,

David
