
Subject: Printing problems under Object Graphics ...

One of the wonderful things about working in Australia is posting a usenet question just before leaving the office and having a response await you the following morning courtesy of those dwelling on the opposite side of the earth ...

I tried printing under object graphics today for the first time - without success. My view renders beautifully to an IDLgrWindow object but when drawing to a printer destination, the created file size is 0. Obviously I am once again doing something foolish but I can't spot the error:

```
p = obj_new('IDLgrPrint')  
p->draw, myview ; where myview is a valid IDLgrView  
result=dialog_prntersetup(p) ; choose printer settings  
p->newdocument ; spool the output  
obj_destroy, p
```

I am choosing an EPS file for output in the printer dialog. This is IDL5.1 running under Linux RedHat 5.

Any help is much appreciated.

Darran.
