## Subject: Still can't understant this language! Posted by clovis21 on Mon, 20 Jul 1998 07:00:00 GMT

View Forum Message <> Reply to Message

Hello again,

I'm stuck again with IDL (version 4). Having bought David's book, I discovered my data was different to his, so I thought I'd have az quick look through the data to see which sets were which. I thought this would do it:

for i=0, 50 do begin &\$ print, i &\$ test\_val=loaddata(i) &\$ help, test\_val &\$ endfor

(entered at the command line) instead I get stuck in an infinite loop which effectively trashed the session.

this \_does\_ work, however:

for i=0, 50 do begin &\$ print, i &\$ j=i &\$ test\_val=loaddata(j) &\$ help, testval &\$ endfor

anyone have any ideas why?

Thanks,

martin
