Hi,

I have created an image which is an array of size 1024x1024. However when I use tvscl to view the image the idl display window which pops up is smaller than 1024x1024. Does someone know how I can change the size of the display window, so that I can view the entire image?

Thanks -

p.s. I tried looking up the FAQs for this news group, however the web page contained no information.
