Subject: STL or IGES writers

We are interested in converting a grey scale image - where the grey scale corresponds to topography - to an STL format or an IGES format. The grey scale image can be in pretty much any common image format (TIFF, GIF, PICT, EPS, JPEG, etc). Does anyone know of an IDL routine that can do this? Is there a shareware program that can do the conversions on a Mac or a PC? Any help would be appreciated.

Thanks, Will
