If someone sells you the software, make sure you get the HASP hardware
key also. The hardware key goes into the ADB port. Without it, you can
only run demo mode even if you have the correct registration number.

I suggest you talke to the RSI sales rep and explore different options.
If you have already purchased a version for work, you can get a second
copy and the key at a reduced price provided you sign the home use
agreement.

good luck,

There is a student version available for $79 I think, if you are
affiliated with an academic institution. It has a few limitations, but
likely won't bother you unless you regularly employ large arrays, or use
SAVE/RESTORE frequently.

Have you tried the demo version? It costs nothing.

ftp://ftp.rsinc.com/pub/idl_5.1/macintosh/README.TXT

Cheers,
Liam.
