Gentles,

I hope there is someone reading this group who can help me. I am trying to generate a single graph which has several sets of data that all share the same absysa range. In order to present them most clearly, I have offset them by 0.33 normalized units, however to present them most completely I would like to show the 0.1 scale on the first set. Is there any way I can set YMINOR as 10 from 0-1 and as 3 from 1-5? [or an equivalent set of AXIS commands?]

Thanks in Advance,

Jim Boyd
