David,

just downloaded and tried XCD. Very nice, indeed. However, I would like to report two bugs (and since I don't have Paul's email, I figured, I might report them to you):

* When I double cklick on a directory, I sometimes get the error message INDEX out of range ... This occurs when th eunderlying subdirectories has fewer entries than the directory you are pointing at. Example:

```
adir
bdir
cdir
ddir---- addir
      |- bddir
```

Say you double click on ddir, then you will get this error. Sure, you can ask: why would he want to double click? That's just my fingers who have always known to tremble when I want to change into a directory in a file selector.

* The "drive" list in our Unix environment becomes `_very_` long, i.e. it extents beyond the borders of my 20" monitor, and unfortunately, there is no way to scroll it.

Best regards,
Martin.
