<HTML>

Hello,

<BR>I would like to choose an unique image file format for our group of research, like HDF, Analyze, Dicom, ...

<BR>My specifications are the following:

<BR>1. Store image and volume of differents types (byte, long, float ...)

<BR>2. Be recognized and used in the biomedical domain

<BR>3. Command to read/write in IDL, or simple program to read/write in IDL that we can develop

<BR>4. Compatible with commercial softwares like Photoshop, ...

<BR>Is anyone has an know-how or experience with a specific file format, it will be great to help me in my choice?

<BR>Thank you.
