
Subject: Trouble running IDL3 widget programme on IDL4/IDL5

Posted by [Darren Kelly](#) on Mon, 14 Sep 1998 07:00:00 GMT

[View Forum Message](#) <> [Reply to Message](#)

Dear IDLers,

I wrote a widget application that ran finw under IDL3. Under IDL4 and IDL5 it brings up the main form, some of the widgets across the top are active, but the other never appear. If I click my QUIT button, the application closes properly, so I know it registers properly.

I wrote to ask IDL and after I was told (after three mails) to read IDL4.01 Help "A note about widget Sizing", which didn't help me. Whether that's because I'm stupid or not doesn't worry too much, I just want the application to run (again). Be very glad for some help. Here's the code for generating the widgets, hope it isn't too much.

(Needless to say I think IDL could have done a better job of explaining changes required to make IDL3 applications run under IDL4 and IDL5).
