Hi folks,

I plotted global satellite data on Hammer projection and then overlaid continents using Map\_Continents call with fill\_continents keyword set. If the output device is postscript, then I got error message:

% Number of Polygon vertices exceeds limit for some PostScript printers

What is this nonsense? I cannot do anything with this postscript file either in Photoshop or Illustrator on a Mac. However, if I don't set the fill\_continents keyword, then everything is fine.

Any suggestions?

thanks in advance
