On the command prompt try:

```
IDL> for i=0,10 do begin &$ plot,findgen(20),col=1 &$ endfor
```

```
IDL> window,xsi=500,ysi=500
```

What happens on my system is nothing after I enter the first line, then 10 windows opening and closing after the second line.

Enjoy,
Martin.

PS:

```
IDL> print,!version
```

```
{ mipseb IRIX unix 5.1.1 Jul 20 1998}
```
