Unfortunately no. You'll need to do this by hand, if you really want to
convert **all** your Matlab source to IDL.

If you have some Matlab numerical routines that you want to call from
IDL, it's conceivable that you could compile your Matlab source to C
code, and then call the C code from IDL. However I'd only go down this
path if you had a **lot** of Matlab numerical routines. And if your Matlab
source contains a lot of graphics or widget calls, then conversion by
hand is pretty much the only option.

Cheers,
Liam.
