Can anyone tell me why the following code prints a second copy of the text string when I change the value of one of the exclusive buttons.
Thanks for any replies.

```
pro test_event, event
```

```
case event.value of  
'1': print, 'you pressed 1'  
'2': print, 'you pressed 2'  
endcase  
end
```

```
pro test
```

```
base = widget_base ()  
base1 = widget_base (base, row = 1)  
dimension = ['1','2']  
bgroup2 = CW_BGROUP(base1,dimension, /RETURN_name,/COLUMN,/EXCLUSIVE)
```

```
WIDGET_CONTROL,base,/REALIZE  
xmanager, 'test', base
```

```
end
```
