Can anyone tell me why the following code prints a second copy of the text string when I change the value of one of the exclusive buttons. Thanks for any replies.

```
pro test_event, event
```

```
case event.value of
'1': print, 'you pressed 1'
'2': print, 'you pressed 2'
endcase
end
```

```
pro test
```

```
base = widget_base ()
base1 = widget_base (base, row = 1)
dimension = ['1','2']
bgroup2 = CW_BGROUP(base1,dimension, /RETURN_name,/COLUMN,/EXCLUSIVE)
```

```
WIDGET_CONTROL,base,/REALIZE
xmanager, 'test', base
```

```
end
```
