"Pedagogoptimal". I like that word. :-)

Yes, I realize that this is an inefficient way to write this code and I appreciate your speedups. I do try to write code that people can understand easily. This is one of my favorite pieces of inefficient code because I think it really draws attention to the idea of producing color "separations".

But I'm going to be incorporating your speedups in my own production code and I encourage our readers to do likewise.

Cheers,

David
