
Subject: PV-Wave: Linux Installation Problem

Hi,

I am trying to install PV-Wave v6.1 on RedHat Linux 5.2, but I am having trouble. The initial problems were that the install script couldn't find libtk.so.1 and libtcl.so.1, but I fixed that by symbolically linking them to libtk.so and libtcl.so, respectively. That solved that problem, but now I am stuck. The installation script bails out like this:

```
[root@foobar vni]# /cdrom/UNIX/INSTALL
Application initialization failed: $msg
[root@foobar vni]#
```

Can anyone help or point me in the right direction?

Thanks in advance,

Greg H.
