Hi Everybody,
I just tried to port my IDL routines that inlcude IDL's built in CDF
routines from UNIX to the PC. This is the first time a port didn't work
right away for me. This is what happened:
I am using the CDF_VARGET routine to read data from a CDF file into a
variable. The whole file is only 150KB small and I tried to read the
'Epoch' variable. The error I get is: IBM_PC_OVERFLOW: Greater than 64Kb
of memory required.
Does that mean I can't read any CDF file variable that is greater than
64KB??? Why use CDF then???????
Maybe since I don't see the solution right now you know better than I
do....

Thanks for helping....
Haje
