
Subject: 3D Density Plots?

Does anyone know how to generate 3D density plots? In other words given a set of x,y,z positions, produce a 3D image which establishes a voxel value as the "density" of positions in a region. This is essentially a 3D scatterplot with a sort of fuzzy cloud function around the dense regions.

Any clues? Please email directly to me as well as the newgroup, since I'm a little desperate and short on time.

Thanks!
