
Subject: I/O of data coded in units of n-bits

Hi,

some image-data (--> daedalus-scanner) are distributed with really strange data-formats, p.e. 12 bit per entry.

Is there a way to read/write such data in IDL / Wave, i.e. accessing the data bit by bit?

Another application for that would be the I/O of image-data with a depth of 1 bit.

Karl
