We get the following error when trying to restore a SAVE file:

```
% RESTORE: Truncated save file, restored as much as possible:  
fm1b3-7alld500m.sav.
```

Is there a size limit on SAVE files? I notice that two files, both  
"Truncated", have the same file size:

```
fireman@barebackride> ls -l /data10/l1A_data/khayat/  
total 140032  
-rw-r--r-- 1 khayat user 35848192 Dec 11 13:47 fm1b1-2alld250m.sav  
-rw-r--r-- 1 khayat user 35848192 Dec 11 13:50 fm1b3-7alld500m.sav
```

I got your error message if I break the restoring process with CTRL-BREAK.

I got no errors saving or restoring of a file with 65 MByte file size.
