
Subject: IDL5.2 and "corrupted descriptors"

Hi,

I have written some widget tools which I have been using with no problems under IDL5.1 and 5.0 (and earlier) on a Windows NT 4.0 x86 platform. However, under IDL 5.2, I occasionally get the following error message:

%Array has a corrupted descriptor: "name"

where "name" is the actual name of the array. There is no help pertaining to "corrupted descriptors" in the documentation. I have been unsuccessful in determining the cause of the error message. I kept my IDL5.1 installation on the same host machine and the code runs with no problems under 5.1. Any suggestions?

Cheers,

Robert
